Steel Bits are used in extremely soft grounds for shallow or casual drilling and in tapping of steel mill blast furnaces.

If sharpening can't or won't be performed, Econ bits are often the most economical type of bit to use. They are particularly suited for soft and nonabrasive conditions.

Full size tungsten carbide inserts, which resist gauge wear & abrasion, makes this our most popular item. The design allows for multiple sharpenings & continued reuse until the inserts are consumed.

The button type tungsten carbide inserts make this the bit of choice for drilling in very hard rock or concrete.
